What is a Gem Dig?

A Gem Dig is an easy and fun search for natural gemstones hidden in bags or buckets of dirt.

How does it work?

Water flows over an 8-foot water wheel into a wooden trough. To find the raw gemstones, dump your bag/bucket of dirt into a screen tray, lower it into the trough and sift it in the rushing water with a gentle side to side motion. The water will slowly wash away the sand, and you will see raw gemstones such as Amethyst, Citrine, Topaz, Ruby, Sapphire, Garnet, Tourmaline and many more!

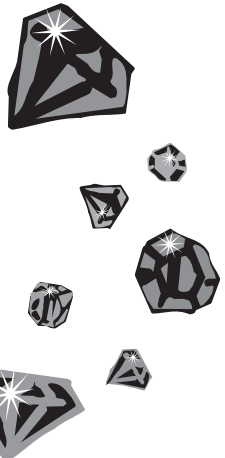

What do we do with our Stones?

Once you've uncovered your raw stones, our knowledgeable, friendly staff will help identify your gems. Each customer will be given a drawstring take-home pouch with a treasure chest identification card to help you remember what stones you have. Most of the stones you find can be cut or set in silver or gold jewelry!

You are guaranteed to find amazing gemstones in every bag/bucket of mining ore!

Where is the Gem Dig located?

Nestled in 55 acres of quiet, wooded farm land on the south side of High Point at Interstate 85 exit 113. Head north on Hwy 62 and take immediate right on Kersey Valley Road. We're 1/4 mile down on right.
